

## ***Luceo Inspection Worldwide's first participation at Seafood Processing Europe***

***For the first time Luceo will present its packaging inspection machines to seafood packers in SPE.***

Vern-Sur-Seiche, 23rd April 2009- Luceo Inspection Worldwide designs and develops ThermoSecure a range of solutions dedicated to consumer protection, brands protection and automation of processes.

### **A packaging under control – sealing quality, marking and labelling**

ThermoSecure detects the packs with contaminated seals and checks the position of the labels, the quality of silk screening and alignment and reads variable information (best before date, barcodes, etc) regardless of the character set and the orientation, size and colour of the packaging. It also checks the coherence of the weight/price information of the packaged products (shrimps, fish, ready meals, etc) automatically and at high throughput.

100% inspection of the quality of individual packaging is Luceo Inspection Worldwide's core business. The ThermoSecure range has units for a wide variety of manufacturing requirements: a model for building in to a FFS machine, an independent inspection machine with automatic rejection and the simple inspection unit.

### **About Luceo Inspection Worldwide**

Luceo Inspection Worldwide is a brand of the Tiama group, the world leader in innovative vision inspection systems. Luceo is backed up by the Tiama group's international experience and the reputation of its top-class customer service and produces a range of equipment designed to meet quality, traceability and food safety requirements.
